

KeeDx Whitepaper

(Your Authentic BSC & Gate chain-based DEX with cutting-edge performance)

Introduction

KeeDx furnishes a real-time peer-to-peer marketplace built upon the BSC & Gate Chain. It employs advanced back-end mechanisms for its decentralised exchange which power its lightning-fast order matching system. KeeDx has been curated with the vision of financial transparency, community centric objectives, and values of accountability and responsibility. To incorporate the suggestions and recommendations by our users, the KeeDx team has laid down the first pillar of the project to be an Order Book Based DEX. Our Liquidity Providers (LPs) and Traders will function hassle free with no barriers at all.

The next foundation has been laid on providing seamless performance similar to a Centralised Exchange by deploying an Off-Chain Matching Engine. It has been specifically designed to maintain complete transparency and fairness with extra security while matching trades off the blockchain and across multiple ones. In doing so, our users are in complete control of our funds unlike other exchanges.

Anyone using KeeDx can withdraw funds at any time and will be subjected to ZERO trading fees. We value the trust of our users above anything else.

KeeDx has been meticulously designed to merge the distinct characteristics of DEXs like privacy, negligible downtimes, zero monopoly over assets, no manipulation, and transparency of the highest order with the strengths of CEXs like scalability, speed, and most importantly the ease of use and liquidity. KeeDx is an order-based DEX with faster performance than SWAPS. With a community first approach, KeeDx will always work towards initiating regular checks and balance mechanism so that our users' trust on us is re-affirmed.

KeeDx Roadmap

The project has been designed to be executed in a phased manner with four very important sequential development stages. We are currently in the pre-production and pre-launch works for the project and have scheduled an official launch in Q3 of 2022 which will be followed with KeeDx Testnet Airdrop (BSC & Gate Chain).

Phase 1 (Q3 of 2022): It will comprise of the initial project launch with KeeDx Testnet Airdrop (BSC chain), KeeDx IDO on Multiple Launchpads, and \$KDX listings on various DEXs. Partnerships with VCs and DeFi projects. KeeDx testnet live on BSC Testnet. \$KDX smart contract Audit.

Phase 2 (Q4 of 2022): KeeDx Testnet will be live on Gatechain. KeeDx Mainnet will be live on BSC and Gate chain which will be followed with the launch of KDX Staking program on multiple DEXs. We will also list \$KDX token on CEXs. Collaborate with high quality projects and list their tokens on KeeDx.

Phase 3 (Q1 of 2023): KeePad launching on BSC & GateChain. Partnerships with top DeFi projects. We will make KeeDx Testnet live on More chains and continue with \$KDX listing on major exchanges.

Phase 4 (Q2 of 2023): New features will be rolled out and other blockchains will be added to KeeDx. When the targets of our current roadmap are accomplished, we will be sharing the next version of the roadmap.

KeeDx: Originating from the battle between CEXs and DEXs

(Courtesy: medium.com)

DEXs for the last couple of years have made several serious attempts to be able to live up to the true philosophy of cryptocurrencies and blockchain. Many have been able to attain a non-custodial nature, low trading fee, etc. Yet, even today the combined offerings of DEXs out there remain only a small fraction of the total market share. Platforms like Binance, FTX, and Coinbase are ruling the market.

While DEXs are focused on users' control, CEXs require their users to put their trust in a central entity which would be handling the operations. The very premise of introducing cryptocurrencies was to have a decentralised framework where no single body would exercise their control over rest like in other markets. DEXs have tried but find several roadblocks to overcome.

Decentralised Exchange (DEX)	Centralised Exchange (CEX)
No 3 rd party operator	3 rd party operator is present
Less volume	High volume
Hacking proof	Vulnerable to cyber threats
No database entries	Entries done in database

(DEX vs CEX)

KeeDx (KDX) Tokenomics

KDX is the official token of KeeDx with a lifetime supply capped at 7,500,000 KDX. The Tokenomics is as follows:

20% to Development: 1,500,000 KDX

17% to Marketing: 1,275,000 KDX

15% to IDO/Public Sale: 1,125,000 KDX

14% to Ecosystem: 1,050,000 KDX

10% to Staking: 750,000 KDX

9% to Liquidity Pool: 675,000 KDX

7% to Team: 525,000 KDX

5% to Advisors: 375,000 KDX

3% to Airdrops: 225,000 KDX

KeeDx(KDX)Tokenomics

Total Supply	IDO/Public Sale	Development	Marketing
75,00,000 KDX	15%	20%	17%
Liquidity	Team	Staking	Advisers
9%	7%	10%	5%
Ecosystem	Airdrop		
14%	3%		

Utility of \$KDX

KeeDx is a decentralized ecosystem that offers financial services to the community. It has its own native token \$KDX which is used to reward users for their participation in the ecosystem. The ecosystem includes a decentralized exchange, a staking platform, and a community governance platform. The native token \$KDX can be used to participate in the start-up sale on KeePad. KeeDx team will be working hard to get the \$KDX token listed on major exchanges.

KeeDx Main Competitors

Forming our own identity and space has been our primary goal. Our team believes in a healthy competition where various SWAP based DEXs like Pancakeswap and Uniswap inspire us a lot. We will compete with in a constructive manner and strive to provide the best services to our users. As we are a multi-chain DEX, our advanced orders are executed smoothly and traders will be able to keep a track of their buy and sell orders.

KeeDx: Advanced features

Decentralized Exchange: Order book based and completely decentralized exchange on BSC & Gate chain. Paperwork becomes a hassle for users at times. Therefore, at KeeDx, no KYC is required offering an extremely impeccable experience similar to CEXs.

Accessibility: KeeDx is a very fast and simple to use DEX. It is the most secure DEX on the BSC and Gate chain with no trading fee for KDX holders. The platform has been designed after conducting multiple surveys with regular users of CEXs and DEXs and incorporating their inputs.

Order book based: An order book is an electronic list of buy and sell orders and KeeDx has implemented that in the framework.

Multiple Chains supported in a single DEX: KeeDx effectively becomes a super aggregator by combining multiple chains (give examples) in a single DEX.

No trading fee for KDX holders: We are a no-fee trading platform where cryptocurrencies can be bought/traded without paying a commission to a broker.

👉 Order book-based DEX

📁 Multiple Chains support in single DEX

🛂 No KYC required

💻 Same trading experience as CEXs

✓ Faster than Swap

👤 Assets are always in users' control

🔥 No trading fee for KDX holders

Meet our Team

Mark Kee: Has worked extensively in Blockchain technology & Spearheaded several projects since 2016. He has worked in DeFi VC as Advisor. Mark has also been a long term in Crypto DeFi space. Mark has 5 years' experience in DeFi space worked in several DeFi projects.

Shin Spen: Shin has associated with various crypto startups, Provided key strategic insights & aid in development and execution stages.

Adam: Adam has worked in Hitbtc and Noundex through 2019-20, and made significant contributions to many blockchain projects over the last 6 years. Does indeed have a comprehensive understanding of DeFi project management.

Contact Options

Our team is available 24x7 for solving your queries and assisting you during the on-boarding process. Contact us on the following handles:
